

①

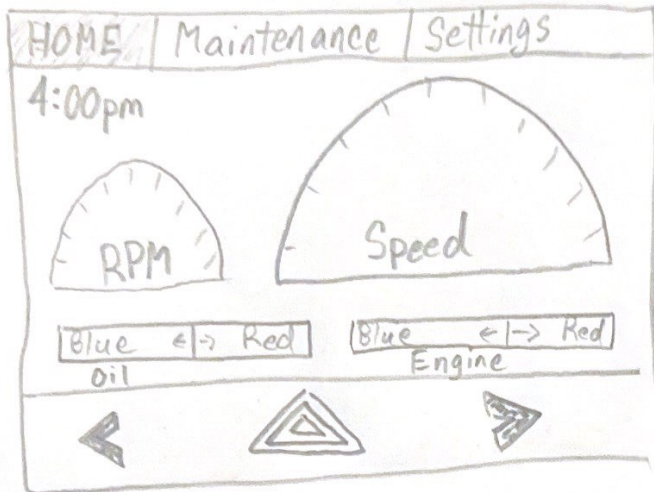

DASH <input checked="" type="radio"/> DIAGNOSTICS
Speed: # Km/h
Speed: # m/h
RPM: #
Engine Temp: #
Gear: P

- All info wanted while
Driving

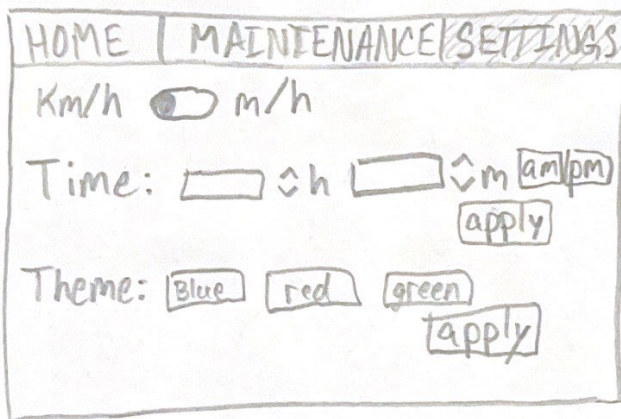

DASH <input checked="" type="radio"/> DIAGNOSTICS
Minutes: #
⋮

- All info wanted during
maintenance

2

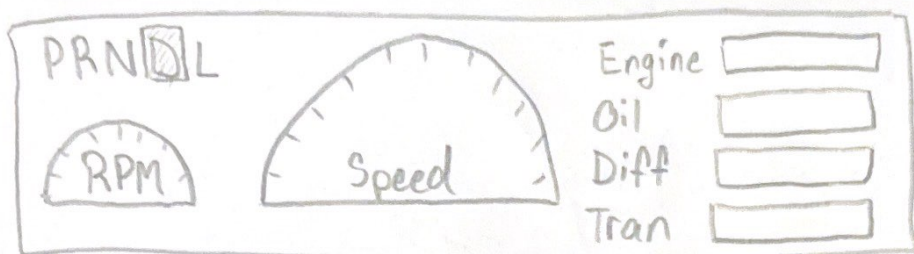

- Much more visual indicators
less reading necessary

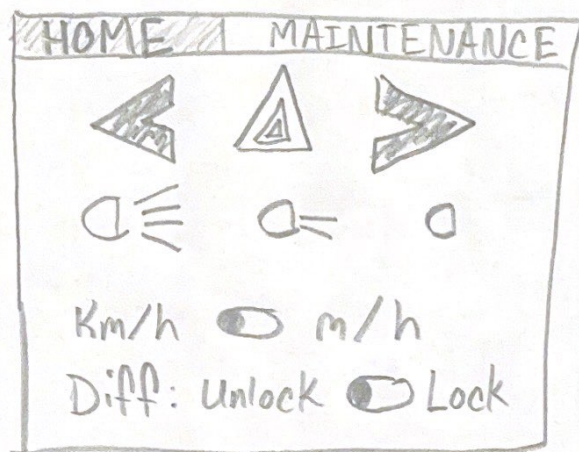

- Could control time & have
other colour options if
we wanted

- Maintenance page similar setup as 1, but could
make it very interactive

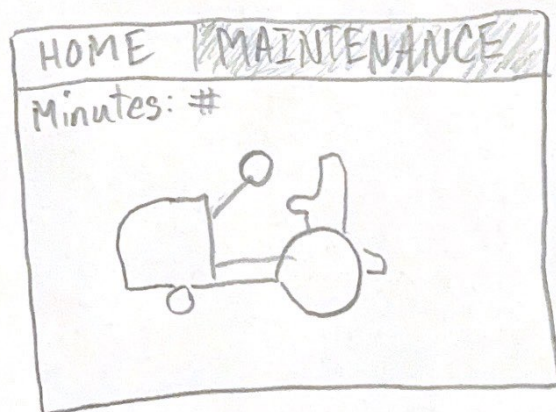

3

- Dash display: For consistency show PRNDL at all times highlight one in use, display all temps visually.

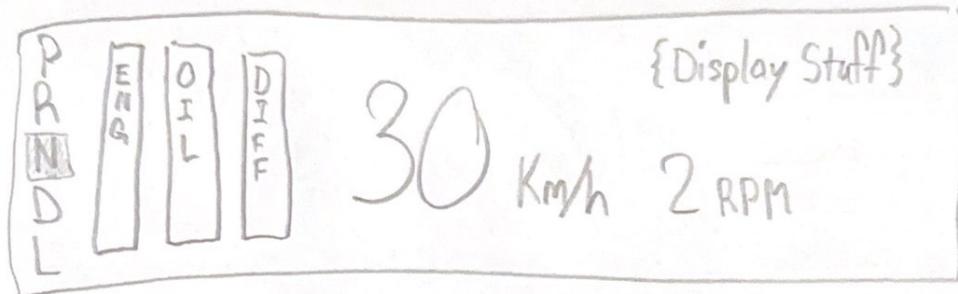

- Interactive things while driving

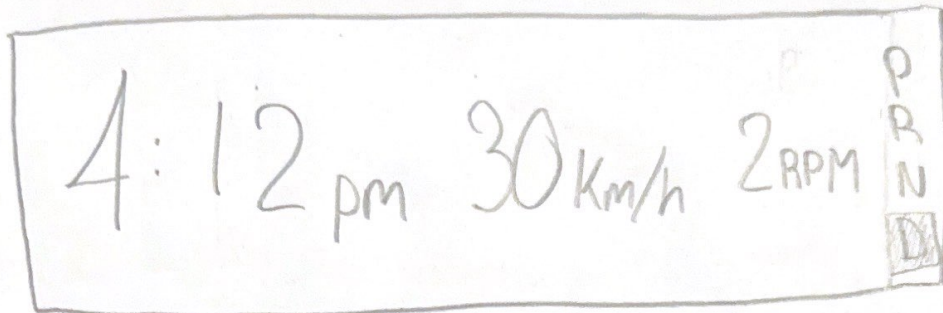

- Some type of interactive picture would be difficult but cool. Don't know what all maintenance info we need/have.

④

- Have an area to display state of lights, diff, etc.
- Touch design same idea as ③

5

- less on main dash display. Simplicity could be a plus
- Have to compensate on touch screen
